Since the invention of automobiles, there were sporty cars and there were practical cars. BMW engineers dared to design a car with features of both. In doing so, they created one of the classic cars of all time, the 3-Series. For over 40 years, this model has given its owner the joy of everyday driving. The commute to work suddenly was as much fun as track day. Follow the story of this category-creating car from the origins of its maker as a World War I airplane engine manufacturer until the hugely successful car it is today. This is the first of three books about the history of the 3-Series. It tells the tale of a failing German car company unable to find its way after World War II. A last-minute loan gave BMW one last chance. The company used that opportunity to create the Neue Klasse generation of cars in which we find the genetic origins of the 3-Series. In the 1970s, the world was reacting to a severe oil-shortage. Introduced just at this right time was the practical but sporty first generation of 3-Series, the E21. With the introduction of the E30, the second generation of the 3-Series, BMW took the success of this two-door coupe and ran with it, creating sedans, wagons, all-wheel drive vehicles

The linguistic typology of motion event encoding is one of the central topics in Cognitive Linguistics. A vast body of typological, contrastive, and psycholinguistic research has shown the potential, but also the limitations of the original distinction between verb-framed and satellite-framed languages. This volume contains ten original papers focusing specifically on the variation and change of motion event encoding in individual languages and language families. The authors show that some of the central claims about motion

event encoding need careful re-examination and reformulation and that individual languages and language families are more variable across space and time than even a refined typology could neatly capture at this time. The volume thus contributes to a more detailed and fine-grained foundation for the investigation of conceptual causes and consequences of different motion-event encoding strategies.

To calibrate is to align something - to move your life into alignment with health and wellbeing. This new form of meditation will support you in aligning your body and mind to live your best possible state. The Oxford English Dictionary defines calibrate as follows: to determine the correct position, value, capacity, etc.; to set an instrument so that readings taken from it are absolute rather than relative. This word was first used in a science context in 1865. Now, in 2012 this word is used in a healing context! The calibration process is where you set your instrument, your body and mind in a health giving direction. The calibrations help you determine the right value and give you the capacity to move forward manifesting the life you want. This process will be effective every time, because you are identifying your personal pieces of the puzzle (not someone else's) and you are healing those pieces. As you heal these pieces, calibrating to health and wellbeing you naturally shake yourself free from past blocks that prevent you from manifesting the life you want. In the calibration process you will align your mind, heart and entire being to a higher level of abundance.
