Each disease-related chapter begins with a detailed description of the patient and the delineating symptoms used for establishing the diagnosis and differential diagnosis. The highly detailed figures illustrate the metabolic derangement in a uniform way, together with essential aspects of the genetics involved, thus affording clarification and better understanding of the treatment. Topics covered range from general aspects such as the clinical approach, emergency treatment, diagnostic procedures, and psychosocial care for the child and the family, to specific discussions of new modes of treatment, including liver, bone marrow transplantation and somatic gene therapy.

Diabetes and hypertension have evolved as two of the modern day epidemics affecting millions of people around the world. These two common co-morbidities lead to substantial increase in cardiovascular disease, the major cause of morbidity and mortality of adults around the world. In Diabetes and Hypertension: Evaluation and Management, a panel of renowned experts address a range of critical topics -- from basic concepts in evaluation and management of diabetes and hypertension, such as dietary interventions, to evaluation and management of secondary hypertension in clinical practice. Other chapters focus on high cardiovascular risk populations such as those with coronary heart disease, chronic kidney disease and minority patients. In addition, evolving concepts and new developments in the field are presented in other chapters, such as prevention of type 2 diabetes and the epidemic of sleep apnea and its implication for diabetes and hypertension evaluation and management. An important title covering two of the most troubling disorders of our time, Diabetes and Hypertension: Evaluation and Management will provide the busy practitioner with cutting edge knowledge in the field as well as practical information that can translate into better care provided to the high-risk population of diabetics and hypertensive patients.
