SUNY Ulster operates under the auspices of the State University of New York (SUNY). SUNY's 64 geographically-dispersed campuses bring educational opportunity within commuting distance of virtually all state residents and comprise the nation's largest and most diverse system of public higher education.

An evidence-based approach to improving the practice of graduate management education Compiled by the Graduate Management Admission Council (GMAC) and with contributions by administrators and professors from the top global MBA programs, this book provides business school decision-makers with an evidence-based approach to improving the practice of graduate management education. The book is designed to help navigate the pressures and create revolutionary platforms that leverage a school's unique competitive advantage in a design distinctly tailored for today's business realities. Offers a unique handbook for improving graduate management education Contains contributions from an international group of deans and professors that lead MBA programs Sponsored by GMAC, owner of the Graduate Management Admission Test (GMAT) exam used by over 5,000 programs worldwide This important resource gives academics a proven approach for improving graduate-level management programs.

Stratigraphy is the branch of geology which studies rock layers (strata) and layering (stratification). Stratigraphy deals primarily with sedimentary rocks but also embraces layered igneous rocks where layers result from successive lava flows. A common goal of stratigraphic studies is the interpretation of sequences of rock strata, thus understanding the time relationships involved, and correlating units of the sequence with rock strata elsewhere. Nicholas Steno described four principles of stratigraphy in the seventeenth century, including the law of superposition which states that, in undeformed stratigraphic sequences, the oldest strata will be at the bottom of the sequence. These ideas still underpin modern stratigraphy which is governed by The International Commission on Stratigraphy. Its primary objective is to precisely define global units (systems, series, and stages) of the International Chronostratigraphic Chart that, in turn, are the basis for the units (periods, epochs, and age) of the International Geologic Time Scale. Stratigraphy has application in many scientific fields, including archaeology, palaeontology and in the search for natural resources. This succinct and accessible introduction to stratigraphy will prove helpful to students and amateur geologists alike.

The Essential Guide to Doing Your Research Project 2e is the ultimate companion to successfully completing your research project. Warm and pragmatic, it gives you the skills and the confidence needed to succeed no matter what happens along the way. The book guides you through every step of your research project, from getting started to analysing data and writing up. Explores the relationship between sport and national identities within the context of globalization in the modern era.

Employment Law in Practice equips the reader with a thorough grounding in the substantive areas of employment law which are most frequently heard in employment tribunals, including unfair dismissal, breach of contract, discrimination, equal pay and family friendly provisions. This new edition has been fully revised and updated with all major legislative and case law developments affecting the topics covered within the manual, in particular, consideration is given to the impact of new age discrimination provisions on current anti-discrimination in employment laws. Containing a dedicated chapter specifically focusing on the regulations and procedural aspects of employment tribunals, Employment Law in Practice fully equips the reader with knowledge of the workings of employment tribunals which will be essential for success in practice. Adopting a highly pragmatic approach aimed at preparing the reader for practice in employment tribunals, the manual contains a specialist section guiding the reader through the completion of forms, highlighting how to deal with interlocutory stages, how to use special procedures and accurately record settlements which will strengthen their success in practice. Designed to accompany the employment law option on the Bar Vocational Course, this manual is also appropriate for anyone who might require practical and accessible guidance on conducting cases in employment law tribunals.

?This book admirably fulfils its stated objective of describing social research methods in action and exploring, from a range of perspectives, the linguistic shaping of social context. Overall, this is a balanced, well-edited and coherent collection of papers, bringing together high quality work from recognized authorities in the analysis of talk-in-interaction. It is also highly accessible; it would certainly make an excellent resource book for undergraduate, graduate (and practising!) social scientists ? - Rebecca Clift, University of Essex ?Talk and Interaction in Social Research Methodologies is a much-needed methods text. Focusing on research methods in action, the volume offers a new way of viewing the realities of social research. By taking language use seriously, the text reveals the details and depths of a wide range of research projects as they have seldom been presented before. This is the first book of its kind to offer such a powerful and insightful depiction of the role of talk-in-interaction in relation to social research methods. The book?s plan is creative and unparalleled. There?s nothing else like it. The editors—Paul Drew, Geoffrey Raymond and Darin Weinberg—represent the very best from multiple traditions of researching talk-in-interaction—from both sides of the Atlantic. The chapters are written by a sterling collection of researchers—a virtual honor roll of conversation analysts and kindred spirits. This book is a "must read" for social researchers of all disciplines who are interested in social interaction. It should be assigned reading for all graduate students being introduced to qualitative methods. It should be on every qualitative researcher?s book shelf. It is a tour de force in demonstrating the absolutely fundamental position that language use holds in social science methodology? - James A Holstein, Marquette University This is a methodology text with a difference. It demonstrates the importance of talk in a variety of social research methodologies. Even documents, the seemingly least interactional form of social data, are shown to have important interactional dimensions. The book focuses systematically on how sociological methods are essentially conducted through forms of spoken interaction, and how these interactions shape the results that emerge in

research. The book demonstrates: " How spoken interactions shape the outcomes of core research methodologies " The role which talk-in-interaction plays in key substantive areas of sociology notably race, crime, gender and media " Reveals the interactional underpinnings of research methodologies This is the first text aimed at an undergraduate and Master's audience in Sociology and Social Research, which shows the crucial part that spoken interaction plays in the conduct and products of conventional sociological methodologies.

In this controversial book, Terry Robson shatters the myth that the current community development movement has the potential to change the nature of society. Robson criticises community development organisations for losing touch with the very communities they are seeking to serve. Against a background of continuing civil and political conflict, Robson examines case studies in Ireland, Britain, Romania and the United States.
