General Dentistry and Oral Surgery have provided Orthodontics the idea of using implants as rigid anchorage. These implants are relatively small, a few millimitres long, which is the reason they are called microimplants. They are being placed at the stage of the treatment when anchorage is mostly needed, and can be easily removed later on.

Orthodontic mini screws provide a stable anchor for fixed braces, allowing for dramatic changes without requiring surgery. In a quick and painless procedure, Micro Implants are screwed into the outer layer of the jaw bone under local anaesthetic. Once in place, they provide a stable support for braces to pull against, enabling dramatic improvements in the

Mini-implants were introduced at the start of the 21 st century as a new means of precisely controlling tooth movements during some orthodontic treatments. They are used by orthodontists across the world to correct bite problems which would otherwise require jaw (orthognathic) surgery. Mini-implant techniques are now part of orthodontic specialist training and many established UK orthodontists ...
