A few minerals exhibit about the same color in a bulk (larger) sample compared to crushed fragments and powder. Check the Mineral Bank for this information. For example, the mineral sulfur typically is yellow-ish in bulk, and its crushed powder tends also to be yellow-ish. Other minerals exhibit a streak that differs in color from the bulk sample.

A mineral is an element that originates in the Earth and always retains its chemical identity. Minerals occur as inorganic crystalline salts. Once minerals enter the body, they remain there until excreted. They cannot be changed into anything else. Minerals cannot be destroyed by heat, air, acid, or mixing.
