As a textbook, *Molecular Biology and Biotechnology* has always been immensely popular. Now in its fourth edition, it has been completely revised and updated to provide a comprehensive overview and to reflect all the latest developments in this rapidly expanding area. Written by recognised experts, the book aims to identify the impact that molecular biology has had on the development of biotechnology, with each of the nineteen chapters describing a specific subject area relevant to the subject. The impressive breadth of coverage includes areas such as plant biotechnology; food technology; vaccine development; the production of transgenic plants and animals; and the addition of an appropriate and timely new chapter devoted to bioinformatics. Presenting information in an easily assimilated form, *Molecular Biology and Biotechnology* makes an ideal undergraduate text. It will be of particular interest to students of biology and chemistry, as well as to scientists from outside the field requiring a rapid introduction to the subject.

This book offers an introduction to the fundamental principles and systematic methodologies employed in computational approaches to ship design. It takes a detailed approach to the description of the problem definition, related theories, mathematical formulation, algorithm selection, and other core design information. Over eight chapters and appendices the book covers the complete process of ship design, from a detailed description of design theories through to cutting-edge applications. Following an introduction to relevant terminology, the first chapters consider ship design equations and models, freeboard calculations, resistance prediction and power estimation. Subsequent chapters cover topics including

propeller design, engine selection, hull form design, structural design and outfitting. The book concludes with two chapters considering operating design and economic factors including construction costs and fuel consumption. The book reflects first-hand experiences in ship design and R&D activities, and incorporates improvements based on feedback received from many industry experts. Examples provided are based on genuine case studies in the field. The comprehensive description of each design stage presented in this book offers guidelines for academics, researchers, students, and industrial manufactures from diverse fields, including ocean engineering and mechanical engineering. From a commercial point of view the book will be of great value to those involved in designing a new vessel or improving an existing ship.

"The Lost Continent: The Story of Atlantis is a fantasy novel by C. J. Cutcliffe Hyne. It is considered one of the classic fictional retellings of the story of the drowning of Atlantis, combining elements of the myth told by Plato with the earlier Greek myth concerning the survival of a universal flood and restoration of the human race by Deucalion. The novel was published first in serial form in Pearson's Magazine in the issues for July-December 1899, and in hardcover book form by Hutchinson (London) and Harpers (New York) in 1900. There have been several editions since. Its was reissued by Ballantine Books as the forty-second volume of the Ballantine Adult Fantasy series during February 1972. Subsequent editions were issued by Oswald Train in 1974 and by Bison

Books in 2002. The Ballantine edition includes an introduction by Lin Carter, and the Bison edition one by Harry Turtledove. Armchair Fiction released it as volume 12 of their ""Lost World-Lost Race"" series in 2017. The novel was also reprinted (slightly abridged) in the magazine Famous Fantastic Mysteries (December 1944), and in the anthology Science Fiction by the Rivals of H. G. Wells by Castle Books in 1979."
