This volume brings together state-of-the-art reviews of the non-biostratigraphic and biostratigraphic data that are used to define and correlate Permian time intervals. It includes analyses of Permian radio-isotopic ages, magnetostratigraphy, isotope-based stratigraphy and timescale-relevant biostratigraphy. It is the first book devoted to this subject and represents the cutting edge of Permian time-scale research.

Uzbekistan more than any other country in the area is likely to play a critical role in shaping Central Asia's future. Situated at the heart of the region and sharing borders with all the other Central Asian states, Uzbekistan is the most powerful and populous of the new states of Central Asia. In this volume, the historical origins of Uzbekistan are explored and the range of political, economic and social challenges faced by the country since independence is charted. Particular attention is given to the emergence of highly authoritarian politics in the country and the implications of this regime for the prospects of economic development, ethnic peace, and the growth of political Islam. The emergence of Tashkent as a force in the international system and the importance of Uzbekistan to other countries in the area, to regional powers and to the leading western countries and international organizations is also examined.

"Neurobiology of Cognition and Behavior" is one of the initial textbooks of brain mapping in the field of cognitive neuroscience. This well-researched text by a leading expert in the field provides a foundational map of the human brain for cognition and behavior. This comprehensive map of essential human thinking

and emotion is based on the explosion in the field of functional neuroimaging studies (fMRI, PET) in the normally functioning human brain. The approach of this text is to confirm the association of these brain regions by verifying that damage to the activated brain area results in a consistent deficit in the cognitive/behavioral operation under investigation. The approach used to form this view of mapping brain and cognition is based on cognitive neuroscience principles of defining dissociable, fine-grained cognitive units and associating these units with brain regions encoding for these units or aspects of the units from both functional imaging and lesion studies. These cognitive-brain relationships are incorporated into clinical syndromes to account for the behavior of these patients after a lesion occurs, with the added feature of presenting patient videos demonstrating the disrupted cognitive behaviors. This comprehensive textbook provides a framework of the basic architecture of cognition in the brain with this combination of activation and lesion study confirmation of the brain-behavior associations. This basic framework is useful for those students studying the interaction of cognitive science and neuroanatomy as well as being relevant to the experienced neuroscientist researcher or clinician.

This book was donated as a part of the David H. Hugel Collection, an archival collection of the Special Collections & Archives, University of Baltimore.
